In this workshop, Ken Martin relates his journey in “flipping” his classroom in order to teach finance and Excel® at the same time. The flipped classroom has been popularized by Salman Khan and the Khan Academy (www.khanacademy.org) and is one in which the traditional paradigm of in-class lectures followed by homework and other assignments is turned around, or flipped. Instead, lectures or demonstrations are conducted outside of class using online tools, while the classroom becomes the time and space for students to do daily activities and exercises. The demonstration and evaluation of student learning occurs in class each day.

Kenneth J. Martin, Ph.D., is a Regents Professor of Finance in NMSU’s College of Business. He received his Ph.D. from Purdue University in 1987 and has previously taught at the University of Iowa. He teaches courses in equity asset valuation, corporate financial management, and financial information technology. He also directs the Wetherbe Fund, a student-managed investment fund. He won the Teaching Academy’s Innovation Award in 2012 because of his work in flipping the classroom to teach finance and Excel®. He also won a Donald Roush award for teaching excellence in 2009.
